## Contents

Preface  

0 Introduction  

1 The Laplacian  
   1.1 Laplace and Poisson equations  
   1.2 Mean value property  
   1.3 Quantitative maximum principle  

2 Poisson equation  
   2.1 Finite measures  
   2.2 Distributional solutions  
   2.3 Superharmonic functions  

3 Integrable versus measure data  
   3.1 Linear Dirichlet problem  
   3.2 Nonlinear Dirichlet problem  

4 Variational approach  
   4.1 Sobolev spaces  
   4.2 Minimizers and the Euler–Lagrange equation  
   4.3 Thomas–Fermi energy functional  

5 Linear regularity theory  
   5.1 Embedding in Sobolev spaces  
   5.2 Weak Lebesgue functions  
   5.3 Critical estimates  
   5.4 Compactness in Sobolev spaces  

6 Comparison tools  
   6.1 Weak maximum principle  
   6.2 Variants of Kato’s inequality  
   6.3 Localization properties  
   6.4 Inverse maximum principle

## Contents

15 **Traces of Sobolev functions** 235
   15.1 Existence of the trace .......................... 235
   15.2 Fractional Sobolev embedding ................. 241
   15.3 Range of the trace operator .................. 251

16 **Trace inequality** 257
   16.1 Capacitary, geometric and pointwise interpretations .......... 257
   16.2 Hölder continuity revisited .................. 263
   16.3 Delocalization of capacitary measures .......... 271

17 **Critical embedding** 275
   17.1 Bounded mean oscillation ................... 275
   17.2 Brezis–Merle inequality and beyond ............ 278
   17.3 Exponential Sobolev embedding ............... 287
   17.4 $W^{1,2}$ and $W^{2,1}$ capacities .............. 291

18 **Quasicontinuity** 299
   18.1 Continuous potentials ....................... 299
   18.2 Lusin property ............................... 303
   18.3 Continuity principle .......................... 306

19 **Nonlinear problems with diffuse measures** 311
   19.1 Unconditional existence ...................... 311
   19.2 Measures must be diffuse .................... 315

20 **Extremal solutions** 321
   20.1 Boundary data revisited ..................... 321
   20.2 Method of sub- and supersolutions .......... 327
   20.3 Nonlinear Perron–Remak method ............. 332

21 **Absorption problems** 337
   21.1 Subcritical case ............................. 337
   21.2 Contraction and stability .................... 341
   21.3 Polynomial growth ............................ 344
   21.4 Exponential growth ........................... 347

22 **The Schrödinger operator** 351
   22.1 Strong maximum principle .................... 351
   22.2 Existence of solutions with measure data ......... 356
   22.3 The bridge .................................... 360
Appendices

A  Sobolev capacity  367
   A.1  Finite semi-additivity  367
   A.2  Outer capacity and pointwise convergence  371
   A.3  Strong additivity  376
   A.4  Measures on dual Sobolev spaces  381

B  Hausdorff measure  385
   B.1  Density estimate  385
   B.2  Frostman’s lemma  388
   B.3  Regularity and uniform approximation  391

C  Solutions and hints to the exercises  395

Bibliography  415

Index  449
