

# Postdoctoral Position in Applied Mathematics

---

We are looking for an excellent postdoctoral researcher with expertise in networked dynamics, control theory, system identification and/or nonlinear operator theory, to join us at the department of Mathematical Engineering, UCLouvain (Belgium). The postdoc position is for a period of one year, starting ideally in January 2024 or before.

## Project

The position is funded by the project “**Modular Koopman-operator based representations for nonlinear network identification**” (KORNET), a joint project between the ICTEAM/INMA institute at UCLouvain (PI: Julien Hendrickx) and the naXys institute in Namur (PI: Alexandre Mauroy). The researcher will be affected at UCLouvain, but spend at least 20% of his/her time in Namur, which can easily be reached by train.

The selected candidate will work on the identification of subsystems in interconnected nonlinear systems with known topology (see [1,2] for results in the linear case and the recent [5] for nonlinear situations), and on the identification of network topology in interconnected nonlinear systems with known dynamics (see [3,4]). This research will take place in the context of a project whose objective is to leverage nonlinear operator theory in the context of nonlinear network identification.

## Profile

The candidates must hold a PhD in Engineering or Mathematics (or equivalent). He/she is expected to have a solid background in Applied Mathematics, with a keen interest in learning theoretical concepts but also in developing practical methodologies for applications. Specific knowledge of networked dynamics, control theory, system identification and/or operator theory will be appreciated.

To be eligible, the candidate must have obtained a PhD degree less than 6 years at the beginning of the postdoctoral fellowship and must not have resided or carried out their main activity (job, studies...) in Belgium for more than 24 months during the last 3 years.

## Timing

The position is open for one year, starting in January 2024 or before. (Subsequent opportunities or later starting dates to be discussed)

## Environment:

UCLouvain is one of the oldest universities in Europe. Its main campus located is in Louvain-la-Neuve, close to Brussels, Belgium.

The Institute of Information and Communication Technologies, Electronics and Applied Mathematics (ICTEAM), hosts more than 40 professors and 200 researchers, and carries out both basic and applied research in key fields of information and communication technologies, electronics, computer science and applied mathematics. Its members teach in the Ecole Polytechnique de Louvain.

You will be joining a team of currently 8 researchers, including two postdocs.

## How to apply

Send an email with title “[Postdoc Kornet]” to Julien Hendrickx ([Julien.hendrickx@uclouvain.be](mailto:Julien.hendrickx@uclouvain.be)), containing a CV, list of publications, and the name of at least two referees.

If you have any question, please contact us at [julien.hendrickx@uclouvain.be](mailto:julien.hendrickx@uclouvain.be).
